Decision Pipelines™

DATAVISUALS™ · DECISION GOVERNANCE™

EXECUTIVE BRIEF · 2026

Accountability you can audit.

Making federal grant and entitlement decisions auditable — every decision owned and on the record at the moment it's made.

AGENCY → STATE / PASSTHROUGH → RECIPIENT → **SUBRECIPIENT ⚑** → BENEFICIARY

Accountability follows the dollar — every tier on the record. Anomaly flagged for human review.

$186B
improper payments, FY2025 — across 64 federal programs

~$3T
cumulative improper payments since 2003

$47B
traced to data-verification failures — the fixable part

01 THE PROBLEM

The gap isn't a lack of rules. Award and payment decisions are too often made without the records that should inform them — and afterward, **no one can fully reconstruct who decided what, on what basis.**

02 WHAT IT DOES

Every decision, on the record.

Each grant or entitlement decision becomes a permanent, tamper-evident record — fraud-risk signals surfaced at the decision for a named owner to act on.

SIGNAL → OWNER → DECISION → ACTION → OUTCOME

- **Single-record screening** — automated fraud-risk screening that checks a record at the point of decision.
- **Identity resolution** — catches one bad actor under many identities across systems.
- **Fund-flow analysis** — follows the money down the full passthrough chain.

03 WHY IT'S DIFFERENT

Beyond payee screening.

Treasury's **Do Not Pay** asks *"should this payee be paid?"* — and does it well. Decision Pipelines asks what it can't: **was the decision sound, who is accountable, and does the money's path show fraud risk?** — across every tier.

> *Accountability follows the dollar. Every decision. Every level. On the record.*

04 BUILT FOR FEDERAL TRUST

- ✓ **Tamper-evident by design** — the record can't be quietly altered, even by an operator, and is independently verifiable by an IG or auditor.
- ✓ **Humans decide, always** — uncertain matches go to a person, on the record. Never a silent merge or auto-denial.
- ✓ **Authorization-ready** — built to inherit FedRAMP cloud authorization and align with continuous monitoring.

`verify ▸ #a3f0…b7 ← #c41d…9e ← #d802…1a ← genesis`

05 WHERE IT FITS — & THE ASK

Directly supports agencies' obligations under the **Payment Integrity Information Act**, and produces the owned, auditable decision record that **risk-based pre-payment review** depends on — now advancing in Congress.

Status: a working prototype on real HHS FY2025 award data with planted synthetic test signals. Live feeds and federal authorization are deferred until a sponsor and pilot are confirmed — so compliance follows commitment.

Seeking a sponsor. An agency or oversight partner for a scoped pilot on a single program — to prove the model on real decisions and a real fund-flow chain.
